

**PLATINUM... Casette Awning**

*for Palmiye*

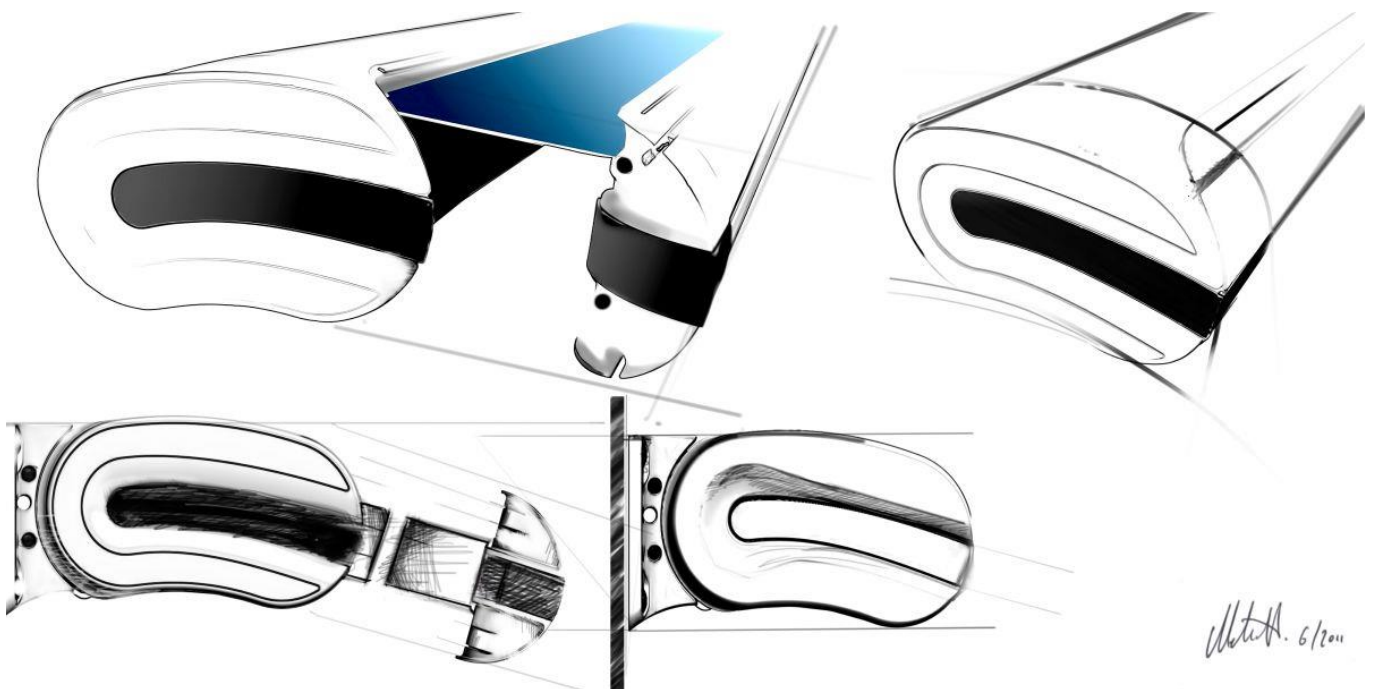

With its aluminum and steel structure, Platinum is a cassette awning. Its motorized system retracts the arms and awning fully into the cassette. With its fully automatic mechanical system and futuristic details it is the top model of its series.

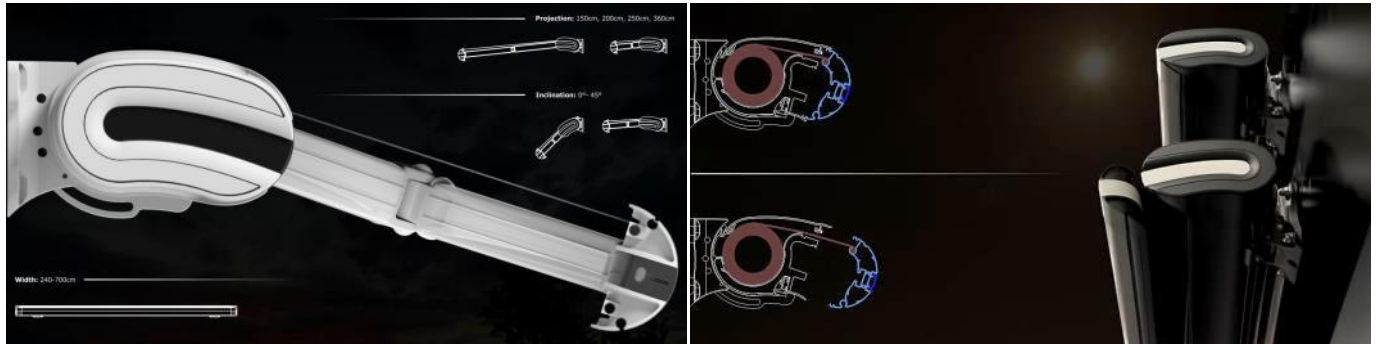

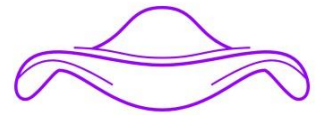

Having an organic and dual-material composition on its side views as in all Regatta products, Platinum, with his maximum values of 360cm projection, 45degrees inclination and 550cm length, is at the top of his class.

The sophisticated sealing details provide full protection for his mechanism and awning; hence he is the first, complying fully with the definition of cassette awning in his class. The design aims to create a muscular posture in its lines, to visually highlight its durability and create confidence for its user.

Within the Mardin Rehabilitation Project that is financially supported by European Union, 650 pieces of Platinum of variable projection values are used on the 1. Avenue, which is one of the protected areas of the region.
