

**HYBRID**  
**Dental CNC**  
Product Design for **REDON**

With its compact and portable design, the REDON Hybrid is a CNC milling unit, designed for the dentist clinics and laboratories.

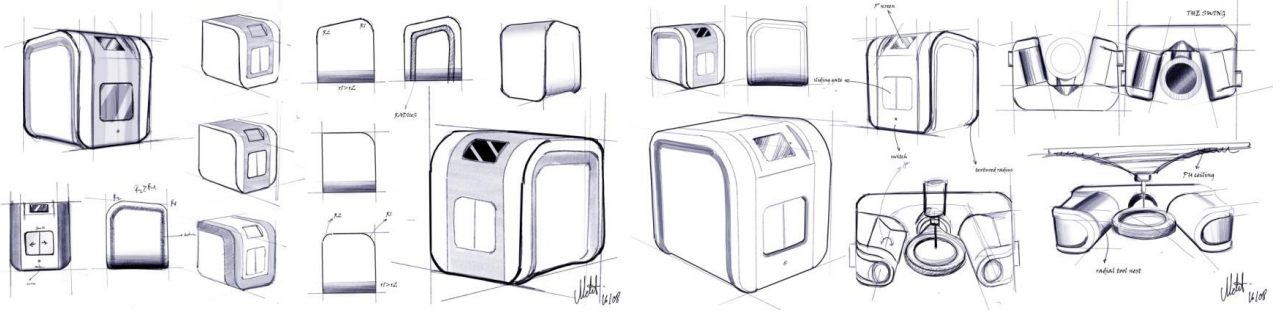

With its quality and speed characteristics, Hybrid produces a faster and more precise production than its competitors thanks to the mono-block cast body and the digital servo motor structure on all axes.

Providing wet and dry running performances, the most impressive feature of the Hybrid is its high performance regardless of the material.
