

NARMOR X
Scuba Diving Gear
Product Design for **INNOVASUB**

NarmorX is the next generation scuba gear, equipped with high end underwater technologies for comfort, safety and ergo dynamics. It is the futuristic scuba equipment that is streamlined, compact, accessible, habitual and safe.

NarmorX is equipped with double scuba tanks, double 2nd stage regulators and double manometers that provide safety and redundancy, as well as double BC inflators, one of which is a pneumatic inflator where you can inflate and deflate in any position.

The body is equipped with an ingenious adjustable weight system, which allows the diver to adjust the center of gravity of NarmorX before the dive, depending on his/her body characteristics and water conditions.

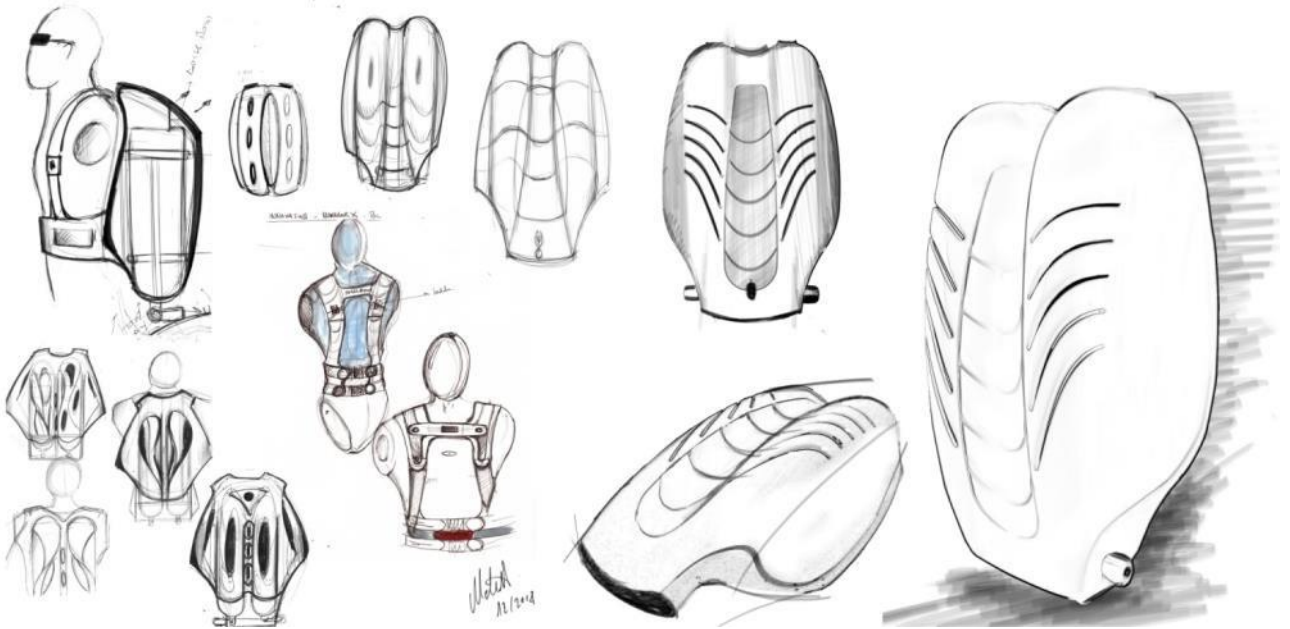

NarmorX's optimal configuration uses composite scuba cylinders rated to 300 bar / 4500 psi, giving the diver approximately 40% more gas to breathe and a lightweight yet protected casing.

The shell protects the light weight carbon fiber tanks and offers the lightest solution for SCUBA. The system can also be used with aluminum tanks and comes in 4 different color selections.
